

# The 2nd largest solar energy complex in Brazil

**8,960**

SP6AH TCUs

**+ 1 million**

bifacial solar panels

**475 MWp**

capacity

Essentia Energia (Patria Investments);  
Bahia State, Brazil

## The challenge

The massive scale of the project required a solution that could be commissioned efficiently and supported long-term in a remote region.

## The solution

---

The plant was commissioned 100% remotely using Suntrack's quick commissioning tools.

Ongoing operations are supported via the Suntrack Service portal and a nearby SAT center in Bahia state with local technicians.

## The result

---

The plant was built and commissioned exactly on schedule.

It remains a benchmark for large-scale solar in Latin America, benefiting from localized technical support and remote monitoring.
